Computer Engineer duties and responsibilities

A Computer Engineer performs many technical and collaborative tasks to develop, fix and update the systems they work on. Their duties and responsibilities often include:

- Collaborating with senior Engineers, Designers, Developers and Project Managers to establish goals and deadlines
- Researching current and new technologies and programming solutions
- Using the development plans and designs from other team members to build software and hardware
- Writing and creating programs for specific uses per company or client needs

- Troubleshooting database anomalies, problems, inefficiencies and data loss
- Compiling and presenting monthly progress and operational reports to the management team
- Handling technical support queries on major and minor bug fixes and other issues
- Integrating updates and new features to existing software and hardware

What does a Computer Engineer do?

Computer Engineers typically work for corporations or computer companies to design and implement hardware and software to maximize productivity. They work closely with other Computer Engineers, Computer Programmers and Network Architects to create and maintain computer systems. Their job is to assist company Executives in creating customized computer systems and making

adjustments to existing systems. They may also be responsible for designing security software to protect networks from potential hackers.

Computer Engineer skills and qualifications

Computer Engineers must use many technical abilities and soft skills in their roles, including:

Copy this section

- Expert knowledge of programming and computer engineering best practices
- In-depth understanding of relevant programming languages, including Python, Ruby, Java and C#
- Familiarity with basic coding, program and design, such as HTML/CSS and database development
- Understanding of integrated system management, content management systems and customer relationship management systems
- Excellent communication skills, including speaking, writing and active listening
- Great project management abilities, including time management, prioritization and organization
- Good collaboration and teamwork skills

Computer Engineer salary expectations

- Common salary: **$100,329 yearly**
- Typical salaries range from **$27,000 - $218,000 yearly**

Computer Engineer education and training requirements

Entry-level candidates likely have a bachelor's degree in computer engineering, computer science or another relevant field. More experienced candidates may also have a master's degree in computer engineering, computer science, network security or another specialized discipline. A master's degree may be preferred for roles with specialized tasks or leadership responsibilities. All levels of candidates may also

have previous training in programming languages and best practices and project management. Some may have professional certifications in specific programming fields or project management.

Computer Engineer experience requirements

Entry-level Computer Engineer candidates may have previous experience from internships or cooperative education programs completed during their studies. Other entry-level candidates may have 1 to 2 years of professional experience in a junior-level role or in technical support. Experienced Computer Engineer candidates with more than 5 years of experience may be suited for roles with more complex tasks or leadership responsibilities.

Frequently asked questions about

Computer Engineers

What is the difference between a Computer Engineer and a Computer Technician?

The difference between a Computer Technician and a Computer Engineer is that Computer Engineers hold more senior roles due t the nature of their job. For example, Computer Technicians need to have extensive knowledge of computers in order to carry out installations, systems upgrades and repair to existing computer systems. In contrast, Computer Engineers are responsible for creating the hardware and software that Computer Technicians install. For this reason, Computer Engineers typically earn more than Technicians. Computer Technicians may communicate with a Engineers regularly to notify them of recurring problems with hardware or software and determine potential defects. They review blueprints to isolate the problem and identify methods to fix it.

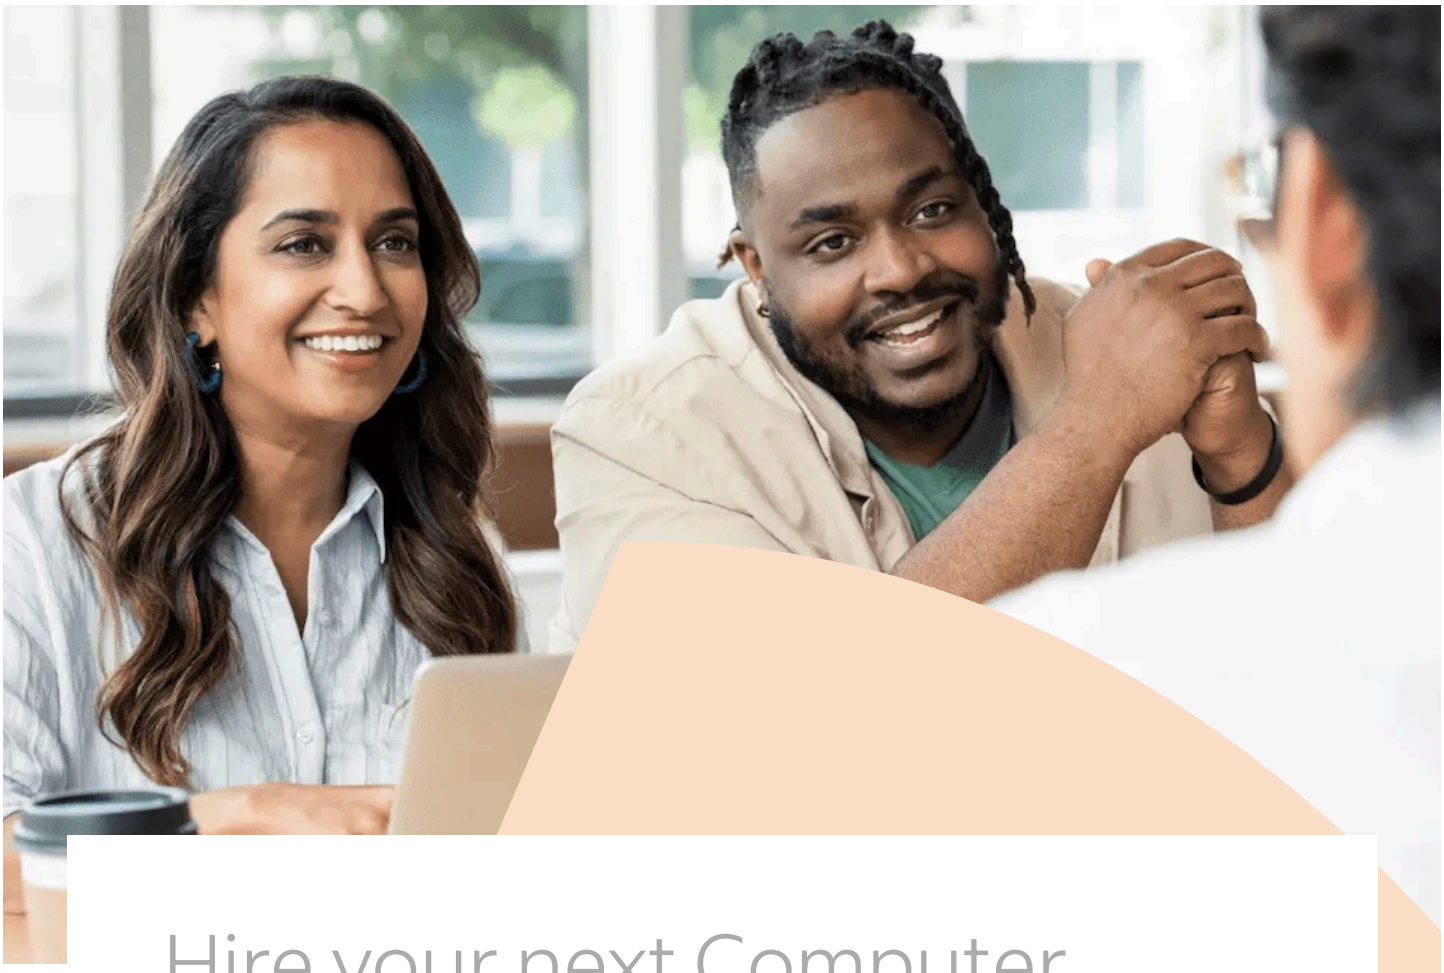

What are the daily duties of a Computer Engineer?

On a typical day, a Computer Engineer starts by participating in meetings where they discuss the progress of ongoing projects, upcoming deadlines and new projects. Throughout the day, they write code and develop new systems or hardware. They often work with a team of engineers and technicians to design new computer systems or hardware and address any issues that arise during the development process. They also help them develop new and influential hardware and software applications that assist professionals in business, manufacturing and data storage. Further, a good Computer Engineer always looks for continued education opportunities to improve their coding and engineering skills.

What qualities make a good Computer Engineer?

A good Computer Engineer is someone who has an innovative mindset. This quality allows them to come up with creative solutions to design flaws in computer systems or hardware constraints. It also helps them develop new and influential hardware and software applications that assist professionals in business, manufacturing and data storage. Further, a good Computer Engineer always looks for continued education opportunities to improve their coding and engineering skills.

Computer Engineers enjoy working in teams to develop new software or hardware. They also value constructive criticism of their designs as they commit to creating the best systems possible for their employer.
