## What Does a Full-Stack Developer Do?

Full Stack Developer work in the IT department of a company performing both front- and back-end operations on websites and computer systems. They design front-end website architecture and work closely with the Graphic Designers in the company to ensure website applications collaborate well with their design elements.

Full Stack Developer often oversee an entire project from start to finish.

They evaluate the needs of users and analyze any technical issues to program highly functional systems. Full Stack Developer are also responsible for staying updated on developments in web applications and constantly train themselves to learn new coding languages.

## Full-Stack Developer Skills and Qualifications

A job description for a Full-Stack Developer should list the following skills and qualifications requirements:

Copy this section

- **Front-end technology:** Expertise in front-end technologies, including JavaScript, CSS3 and HTML5 and third-party libraries such as React Js, Angular, jQuery and LESS
- **Development languages:** Knowledge of server-side programming languages including Net, Java, Ruby and Python
- **Database and cache:** Familiarity with DBMS technology, including SQLServer, Oracle, MongoDB and MySQL and caching mechanisms such as Redis, Memcached and Varnish
- **Basic design ability:** Including knowledge of UI/UX and basic prototype design
- **Server:** Experience working with Nginx or Apache servers with a solid background in Linux
- **Excellent writing and communication skills**
- **Ability to visualize a proposed system and be able to build it**

## Full-Stack Developer Salary Expectations

- Common salary: **$137,140 yearly**
- Typical salaries range from **$36,000 - $302,000 yearly**

## Full-Stack Developer Education and Training Requirements

Educational requirements for a Full-Stack Developer position vary based on company-specific needs. Some companies accept an associate's degree, but most require a bachelor's degree in computer science or another related technical field. In addition, a Full-Stack Developer should have industry certifications in various web design and programming languages, such as HTML, CSS, JavaScript, C#, Python and similar certifications.

## Full-Stack Developer Experience Requirements

It takes time for an individual to develop the skills and knowledge required to be a Full-Stack Developer. Besides knowing about front-end technologies as well as back-end technologies, they must understand each in great detail to ensure smooth and easy communication between them.

An applicant can gain this experience by learning basic HTML, deploying an HTML site to production, learning one back-end language and integrating it into HTML, setting up a virtual server for deployment, deploying a dynamic application, learning one relational database system and integrating it into an app, learning basic CSS and learning JavaScript in order to provide client-facing behavior.

# Frequently asked questions about Full Stack Developers

## What settings do Full Stack Developers work in?

Full Stack Developers can work in a wide variety of environments, but many of them operate in an office setting on an IT team. They use front- and back-end coding to update a company's website and build applications for consumers or employees to use. Some of them may work for agencies, developing computer systems and websites for various companies to enhance their efficiencies. Others may work independently in contract or freelance roles, building software or websites for companies and moving onto a different organization once the projects are complete.

## What makes a good Full Stack Developer?

An effective Full Stack Developer has strong knowledge of and experience with front- and back-end coding languages. They should also have knowledge of various software and programming languages, such as HTML, CSS, JavaScript and Python. Full Stack Developer candidates also know how to write in certain back-end programming languages like PHP, Python or Ruby. They should also have knowledge of basic web and application design principles and how to structure coding to help build the application. A Full Stack Developer often leads a team to build an application or website. They collaborate closely on the application creation process, which is the initial development process. They design the application and the Full Stack Developer collaborates with other employees to implement the other stages of the system production and updating process.

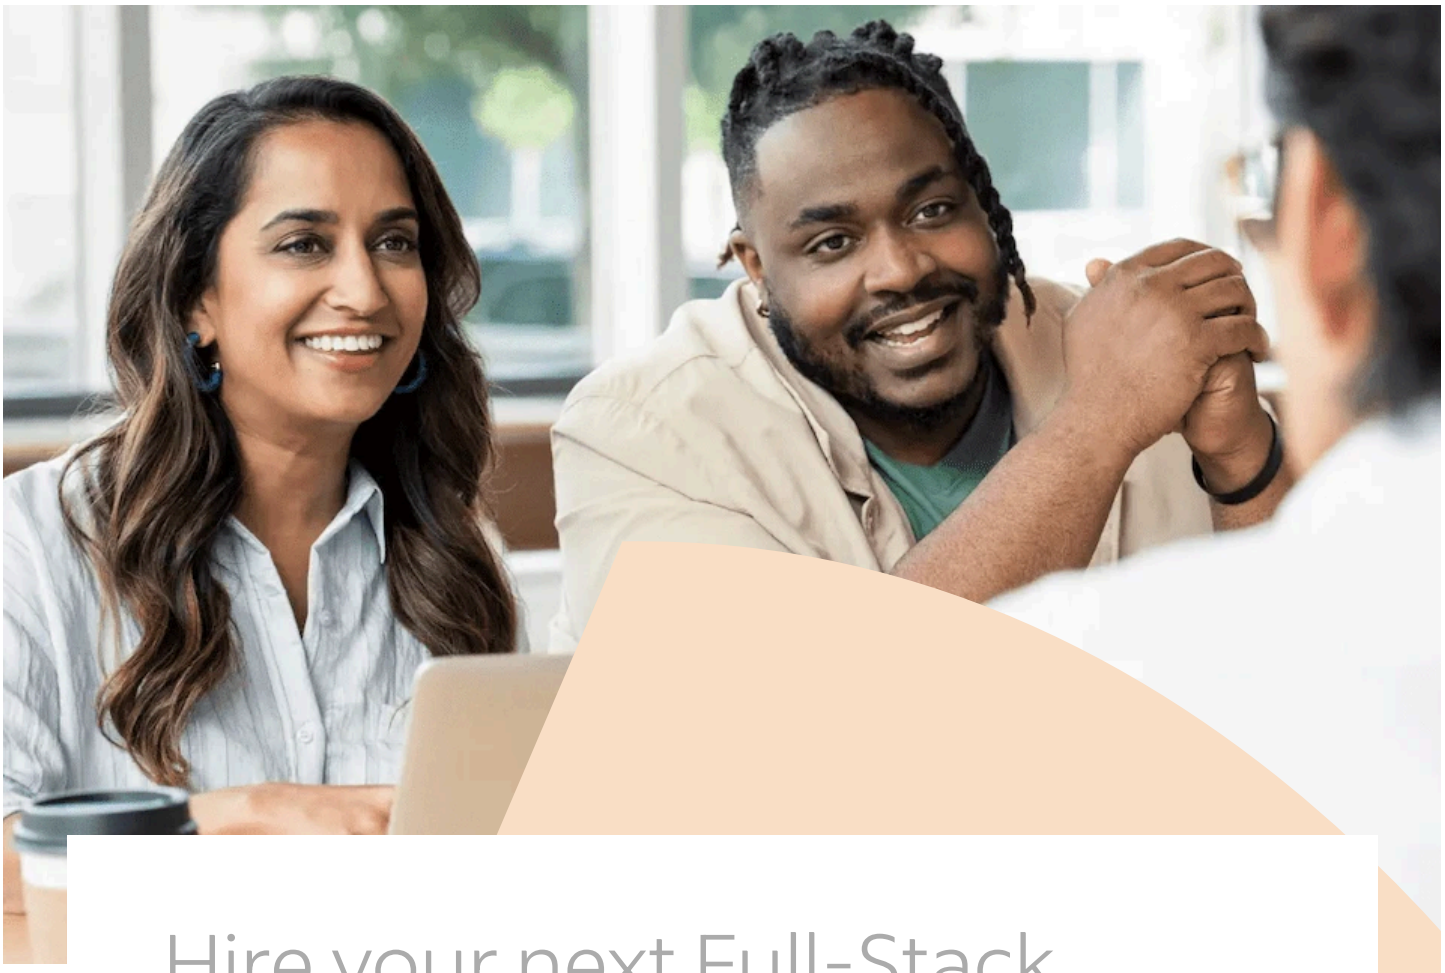

## What's the difference between a Full Stack Developer and a Software Engineer?

Although they both collaborate closely on the application creation process, they have different responsibilities. A Full Stack Developer is in charge of the entire system implementation process from beginning to end and understands how to structure coding to help build the application. A Software Engineer works solely on one stage of the application process, which is the initial development process. They design the application and the Full Stack Developer collaborates with other employees to implement the other stages of the system production and updating process.

## Who reports to a Full Stack Developer?

Since they're overseeing the entire system creation and implementation process, Full Stack Developers should have project management skills to delegate certain duties and ensure the project remains on tasks and meets certain deadlines.

Computer systems employees like UX Designers, Front-End Developers, Back-End Developers and Software Engineers typically follow project guidelines laid out by the Full Stack Developer. If these employees have any questions or concerns about their duties for a project, they'll come to the Full Stack Developer for guidance or advice.
